

Internal resistance of a 9 V battery

Placeholder — replace me

This file is a stand-in for the full lab report.

Objective: Model a 9 V battery as an ideal EMF in series with an internal resistance, and measure both from how its terminal voltage drops under load.

To use your own report:

1. Export the write-up as a PDF and save it as `public/files/labs/battery-resistance.pdf`.
2. Or change `files.report` for this lab in `src/content.js`.
3. Run `npm run check` to confirm the link resolves.
