

Projectile motion with video analysis

Placeholder — replace me

This file is a stand-in for the full lab report.

Objective: Test whether a launched ball follows the ideal projectile model by tracking its position frame by frame in slow-motion video.

To use your own report:

1. Export the write-up as a PDF and save it as `public/files/labs/projectile-video.pdf`.
2. Or change `files.report` for this lab in `src/content.js`.
3. Run `npm run check` to confirm the link resolves.
